

Seymour Johnson AFB
Lead Service Line Inventory and Replacement Plan

This Lead Service Line (LSL) Inventory and Replacement Plan have been completed per the requirements of the Lead and Copper Rule Revisions (LCRR) of 2021.

Status of the Inventory and Replacement Plan (as 29 May 2026):

- Approved by NCDEQ and EPA
 - SJAFB submitted the Inventory and Replacement Plan to the North Carolina Department of Environmental Quality (NCDEQ) by the original 16 Oct 24 deadline (attached)
 - An updated inventory was submitted to NCDEQ in November 2025 (attached)

Published on 30 Oct 24, the Lead and Copper Rule Improvements (LCRI) requires replacement of lead and galvanized requiring replacement (GRR) service lines within 10 years of the LCRI compliance date

- The number of service lines requiring replacement must be updated annually
- The final LCRI requires water systems to replace lead and GRR service lines at an average annual replacement rate of 10 percent

After the Replacement Plan is approved, requests for the status of service line replacements can be emailed to the 4th Civil Engineer Squadron:

Customer Service Unit 4CES.CS@us.af.mil

Lead Service Line (LSL) Replacement Plan

Seymour Johnson Air Force Base

PWSID#: NC 0496055

Date: October 1, 2024

Section 1: Strategy for determining the composition of lead status “unknown” service lines in the inventory

The Water System determines the composition of lead status unknown service lines in its inventory by utilizing *one or more of* the methodologies listed below:

Water Quality Sampling:

- Service Line Sampling: Calculate premise plumbing volume, flush premise plumbing, collect/analyze service line sample.
- Flushed Sampling: After a set flushing time, collect and analyze a sample.
- Sequential Sampling: Collect and analyze a series of consecutive samples from the interior tap to the service line.

Excavation:

- Mechanical Excavation
- Vacuum Excavation

Modeling

- Emerging/Other Method approved by EPA and/or applicable state environmental agency

[enter text describing method if selected]

Non-applicable

- The water system does not have lead status unknown material service lines. If lead status unknown material service lines are discovered, the water system will revise and resubmit this plan to the EPA and/or applicable state environmental agency.

Additional Determination Notes:

For service lines currently classified as “Galvanized Requiring Replacement,” further investigation using the excavation or other acceptable methods may be used to determine if it can be proven the line was never downstream from a lead/unknown service line and be reclassified as “non-lead.”

If any service lines are discovered that aren’t in the LSL inventory or contradict the LSL inventory, the LSL inventory will be updated and classified per LSL inventory methods and methods above if necessary.

Lead Service Line Replacement Plan
Seymour Johnson Air Force Base
PWSID#: NC0496055
Date: October 1, 2024

Section 2: Procedure for conducting full lead service line or GRR replacement

When conducting full lead service line replacement projects, the Water System implements the procedure outlined below.

- 1. Follow established work order procedures including but not limited to:**
 - a. Entry of work order for replacement of applicable service line in authoritative system or initiate contract action.**
 - b. Conduct required project coordination per standard base practices and requirements, including but not limited to:**
 - i. Standard reviews by Civil Engineering offices including environmental, operations, housing (if applicable)**
 - ii. Coordinate with Bioenvironmental Engineering for public notification requirements,**
 - iii. Coordinate with privatized housing if service line is for a privatized housing unit.**
- 2. Ensure all utility markings, public notification and coordination with other entities is complete.**
- 3. Ensure point of use filtering certified by an American National Standards Institute accredited certifier to reduce lead is available as required by regulation.**
- 4. Complete replacement with non-lead lines in accordance with applicable Unified Facilities Criteria (UFC) and applicable codes and regulations.**
- 5. For any contracted replacement of LSLs or GRR lines, ensure procedures above are followed.**

Section 3: Strategy for informing customers before a service line replacement

Before a service line replacement, the Water System will provide information to customers with lead, galvanized requiring replacement, and unknown material service lines.

The information must:

1. provide persons served by a lead, GRR, or lead status unknown service line information regarding the water system's lead service line replacement program and opportunities for replacement of the lead service line;
2. be provided to persons served at the service connection with a lead, GRR, or lead status unknown service line either in-person or by mail; and
3. (if applicable) be sent within 30 days of the end of the tap sampling period in which a trigger level exceedance occurred.

The water system will notify customers at least 45 days prior to the replacement of a water system's portion of a service line. In the notification, the water system will offer to replace the customer-owned portion of the service line.

The water system will utilize *one or more* of the methods selected below for informing customers of a service line replacement:

- Door-to-door Conversations
- Door Hangers
- Mailings (letters and/or postcards)
- E-mails
- Public Notices

Central base facilities, base entry/security facilities, public message boards, etc. Locations where information is currently disseminated.

- Media Outreach
- Outreach through Privatized Housing*
- Social Media Posts
- Other Method approved by EPA and/or applicable state environmental agency

[enter text describing the other approved method]

Section 4: Lead service line replacement goal rate

The Water System serves 10,000 or fewer persons and is not required to provide a replacement goal rate at the time of this plan's submission.

Section 5: Procedure for customers to flush service lines and premise plumbing of particulate lead

Before, during, and after a gooseneck replacement, service line replacement, or other activity necessitating this procedure, the Water System will instruct customers to follow a procedure to flush service lines and premise plumbing of particulate lead.

When possible, the Water System will notify customers in advance of service line replacements in accordance with the strategy described in Section 3 of this Plan.

Prior to working on the service line, the Water System will close water flow to the building interior at a shut-off valve. Then, the Water System will complete the service line replacement. After the work is completed, the Water System will open flow to the building and premise plumbing.

Customers will be instructed to follow this procedure for flushing service line and premise plumbing of particulate lead:

- 1. Do not consume tap water, open hot water taps, use icemaker, or use filtered water dispenser until after this flushing procedure is complete.**
- 2. Remove faucet aerators, screens, and shower heads from all cold water taps in the building. Beginning with the lowest level, fully open the cold water taps throughout the building including showers, baths, and hose bibs.**
- 3. After all the faucets are open, let the water run for at least 30 minutes.**
- 4. Turn off each tap starting with the taps at the lowest level of the building.**
- 5. Clean aerators and screens of solid debris place them back on faucets.**

Section 6: Lead service replacement prioritization strategy

Priority replacement strategy factors are summarized in the table below (1 is highest priority). These have been applied to the Lead Service Line Inventory with the results being provided in Appendix A.

Priority order	Prioritization Factor	LCRR Requirement
1	Known Lead Service Line	Required
1	Populations Most Sensitive to the Effects of Lead Schools, <i>Child Development Centers, Youth Centers</i> and Day Care Facilities Homes with children and/or adults who are pregnant or may become pregnant Medical Facilities.	Required
1	Disadvantaged Communities <i>if applicable (not typically distinguished w/in base boundary).</i>	Required
2	Known GRR Service Lines Serving Populations Most Sensitive to the Effects of Lead Schools, <i>Child Development Centers, Youth Centers</i> and Day Care Facilities Homes with children and/or adults who are pregnant or may become pregnant	
3	Other Known GRR Service Lines	Required
4	Other Situations with Populations Most Sensitive to the Effects of Lead where lead such as <ul style="list-style-type: none"> • Nursing Homes • Medical Facilities 	Required
4	Companion Projects (concurrent infrastructure projects where lead or potential GRR is discovered)	Not Required
5	Other Factors Listed in ANSI/AWWA C810-17 § II.A. <ul style="list-style-type: none"> • Service lines physically discovered by digging, excavation, repair, or other activities • Existing service line replacements new discovery of the presence of lead goosenecks or pigtails 	Not Required
6	Other Factors Significant to the Water System	Not Required

Section 7: Funding strategy for conducting lead service line replacements

The Water System will fund lead service line replacements by:

- 1. Follow funding requirements per Air Force Instruction 32-1020 PLANNING AND PROGRAMMING BUILT INFRASTRUCTURE PROJECTS and the Air Force Comprehensive Asset Management Plan (AFCAMP) Business Rules.**
- 2. For replacements involving privatized housing (PH) units, follow contract terms and work with the Base Housing Office.**
- 3. For replacements where tenant units may be financially responsible for LSL replacement, ensure tenant completes the replacement and reports status to the installation LSL Inventory program manager.**

For customers that are unable to pay to replace the portion of service line they own, the Water System plans to:

- 1. Not Applicable, no private homeowners on AF installations.**

Section 8: LSL Replacement Plan Stakeholders

The Water System stakeholders for implementation of the LSLRP include:

Point of Contact:

Kelley Smith, Water Quality program Manager

(919) 722-7442

Kelley.smith.6@us.af.mil

Office of Primary Responsibility: [CE OPS office symbol]

Oversight of the LSLRP is administered by the Installation Drinking Water Working Group including:

- *[CE OPS office symbol]: update inventory, conduct LSL and GRR replacements as required.*
- *[Bioenvironmental office symbol]: Conduct public notification requirements and ensure inventory is publicly available.*
- *[CEIE office symbol]: Liaison with regulator and track progress for LSL inventory updates and replacement metrics.*

Seymour Johnson AFB - LSLR Prioritization

Location Information					Entire Service Line Material Classification	Lead Service Line Replacement (LSLR)
Unique Service Line ID	Location Identifier		Sensitive Population? (Yes/No)	Disadvantaged Neighborhood? (Yes/No)		
	Street Address	Other Location Identifier				
<i>A Unique ID is recommended for each service line.</i>	<i>Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.</i>		<i>Select Yes if sensitive subpopulation, e.g., day care, school, multifamily home. If Yes-Other, describe in the Notes field.</i>	<i>Does location meet state affordability guidelines or other measures?</i>	<i>Dropdown list includes four required service line classifications of Lead, Non-lead, Galvanized Requiring Replacement, or Unknown</i>	<i>Priority Based Upon 6 Tier Air Force Playbook Criteria</i>

**DEPARTMENT OF THE AIR FORCE
4TH FIGHTER WING (ACC)
SEYMOUR JOHNSON AIR FORCE BASE NC**

6 November 2025

MEMORANDUM FOR SEYMOUR JOHNSON AFB PERSONNEL

FROM: 4 OMRS/SGXB (Bioenvironmental Engineering)
2803 Medical Campus Dr.
Seymour Johnson AFB NC 27531-2310

SUBJECT: Your Service Line is Galvanized Requiring Replacement or Lead Status Unknown

1. The Environmental Protection Agency (EPA) Lead and Copper Rule was first introduced in 1991 to identify and reduce lead and copper in drinking water through corrosion control techniques and routine monitoring. The EPA recently revised the Lead and Copper Rule to further reduce the risk of lead in drinking water. The revision requires water systems to: 1) identify drinking water service lines that are either lead or galvanized downstream of a lead line, and 2) implement a replacement plan for such service lines.

2. Seymour Johnson AFB (PWSID#: NC0496055) has completed our inspection of all drinking water service lines that impact our facilities and military housing. Service lines categorized as lead or galvanized downstream of lead will be replaced as soon as possible. Service lines are smaller water lines that carry water from the main water line (typically running under the street) through your yard and into your home.

3. If your address or building is listed in Attachment 1, it has a service line identified as either Galvanized Requiring Replacement (GRR) or Lead Status Unknown (LSU).

a. Facilities with a GRR Service Line. Based on the inspection, the water line servicing your address is a galvanized line that may have been downstream of a lead service line sometime in the past, defined in the Lead and Copper Rule as “galvanized requiring replacement”. A GRR service line that has absorbed lead can contribute to lead in drinking water. Seymour Johnson AFB is working expeditiously to determine if this service line was downstream of a lead line and, if so, replace it.

b. Facilities with a LSU Service Line. Based on the preliminary results of the drinking water service line inspection, the composition of the water line servicing your address could not be determined. This situation is defined in the Lead and Copper Rule Revision as a “lead status unknown” service line, meaning the service line may be lead but efforts thus far have been unable to confirm the material makeup. While evaluation is ongoing to determine the exact composition, drinking water service lines identified as “unknown” are managed as though they are lead pending further investigation. Any service line where, following further investigation, the material make-up cannot be definitively determined will be replaced in accordance with the installation drinking water service line replacement program.

4. The Department of the Air Force and your Seymour Johnson AFB leadership are committed to the health and safety of you and your family. Reliable access to quality water is a priority for the Department of the Air Force – it impacts our people, our missions, and the communities we call home.

5. Seymour Johnson AFB routinely monitors the water quality and any necessary corrosion control techniques and is preparing to replace all lead service lines or galvanized service lines downstream of lead lines as soon as possible. Seymour Johnson AFB routinely monitors for lead in drinking water and analytical results indicate concentrations remain below the associated regulatory thresholds established by the EPA. The installation inventory and status of the replacement plan can be found at <https://www.seymourjohnson.af.mil/Home/SJAFB-Environmental-Management/>. Questions regarding the installation lead service line inventory and replacement plan can be emailed to the 4 CES Environmental Org Box at 4ces.ceie.environmentalelement@us.af.mil. To learn more about the installation drinking water sampling program, please email the 4 MDG Bioenvironmental Engineering Org Box at usaf.seymour-johnson.4-mdg.mbx.bioenvironmental@health.mil.

6. If you are concerned, there are steps you can take to further reduce your risk. Information on reducing the risk of lead exposure in drinking water and the health effects of lead are provided in Attachment 2, and additional information can be found on the EPA's website at <http://www.epa.gov/lead>.

THOMAS DOMINGUEZ, Maj, USAF, BSC, PhD
Bioenvironmental Engineering Flight Commander

ATTACHMENT 2 – Health Effects of Lead

Health Effects of Lead. Lead can cause serious health problems, especially for pregnant women and young children. Please read this information closely to see what you can do to reduce the risk of lead in your drinking water.

What is Lead? Lead is a common metal found in the environment. The main sources of lead exposure are lead-based paint and lead-contaminated dust or soil, and some plumbing materials. In addition, lead can be found in certain types of pottery, pewter, brass fixtures, food, and cosmetics. Other sources include exposure in the workplace and exposure from certain hobbies (lead can be carried on clothing and shoes). Brass faucets, fittings, and valves, including those advertised as “lead-free,” may contribute lead to drinking water. Environmental Protection Agency estimates that 10 to 20 percent of a person’s potential exposure to lead may come from drinking water. Infants who consume mostly formula mixed with lead service can receive 40 to 60 percent of their exposure to lead from drinking water.

What are the Potential Health Impacts? Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

How Can I Reduce Exposure Risk?

Use filters properly. Using a filter can reduce lead in drinking water. If you use a filter, it should be certified to remove lead. Read any directions provided with the filter to learn how to properly install, maintain, and use your cartridge and when to replace it. Using the cartridge after it has expired can make it less effective at removing lead and lead to other water quality concerns. Do not run hot water through the filter. For more information on facts and advice on home water filtration systems, the USEPA has developed a consumer tool for identifying Point of Use and Pitcher filters certified to reduce lead in Drinking Water available at <https://www.epa.gov/water-research/consumer-tool-identifying-point-use-and-pitcher-filters-certified-reduce-lead>.

Clean your aerator. Regularly clean your faucet’s screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.

Use cold water. Do not use hot water from the tap for drinking, cooking, or making baby formula as lead dissolves more easily into hot water. Boiling water does not remove lead from water.

Run your water. The more time water has been sitting in pipes providing water to your home, the more lead it may contain. Before drinking, flush your home’s pipes by running the tap, taking a shower, doing laundry, or doing a load of dishes. The amount of time to run the water will depend on whether your home has a lead service line or not, as well as the length and diameter of the service line and the amount of plumbing in your home.
